Series G Industrial Reducers

Technical  
Up to - 1,860kW / 165,000 Nm

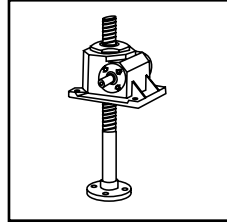

Industrial Reducers  
CG-2.00GB1113

# PRODUCTS IN THE RANGE

Serving an entire spectrum of mechanical drive applications from food, energy, mining and metal; to automotive, aerospace and marine propulsion, we are here to make a positive difference to the supply of drive solutions.

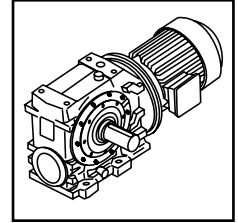

**Series A**  
Worm Gear units and geared motors in single & double reduction types

**Series BD**  
Screwjack worm gear unit

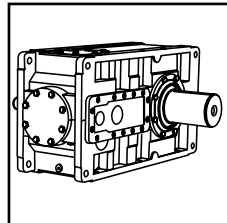

**Series BS**  
Worm gear unit

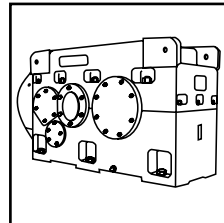

**Series C**  
Right angle drive helical worm geared motors & reducers

**Series F**  
Parallel shaft helical geared motors & reducers

**Series G**  
Helical parallel shaft & bevel helical right angle drive gear units

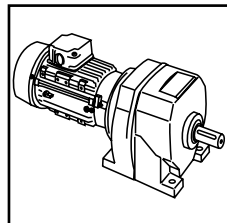

**Series H**  
Large helical parallel shaft & bevel helical right angle drive units

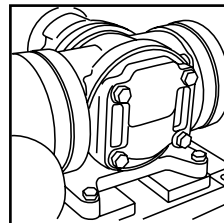

**Series J**  
Shaft mounted helical speed reducers

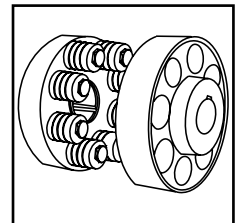

**Series K**  
Right angle helical bevel helical geared motors & reducers

**Series M**  
In-line helical geared motors & reducers

**Roloid Gear Pump**  
Lubrication and fluid transportation pump

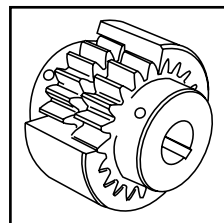

**Series X Cone Ring**  
Pin and bush elastomer coupling

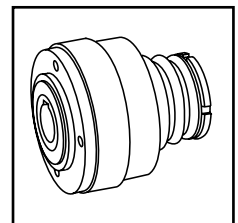

**Series X Gear**  
Torsionally rigid, high torque coupling

**Service & Repair**  
All brands and types

**Series X Nylonicon**  
Gear coupling with nylon sleeve

**Series X Torque Limiter**  
Overload protection device

We offer a wide range of repair services and many years experience of repairing demanding and highly critical transmissions in numerous industries.

We can create custom engineered transmission solutions of any size and configuration.

# ATEX Compliance Assured

Total compliance with the ATEX Directive safeguarding the use of industrial equipment in potentially explosive atmospheres is assured for users of our geared products.

Certification is available for standard gearboxes and geared motors with badging displaying the ATEX zone, name and location of the manufacturer, designation of series or type, serial number, year of manufacture, Ex symbol and equipment group/category.

ATEX directive 94/9/EC (also known as ATEX 95 or ATEX 100A) enforced in all EC member states. Compliance is compulsory for designers, manufacturers or suppliers of electrical and non-electrical equipment for use in potentially explosive atmospheres created by the presence of flammable gases, vapours, mists or dusts.

Ex compliant standard gearboxes can be supplied against Groups 2 or 3 for surface industries in designated hazardous location Zones 1 and 2 for gases, vapours and mists; and in Zones 21 and 22 for dusts.

## GENERAL DESCRIPTION

### Series G

Series G gear units are available in parallel shaft helical units and right angle shaft bevel/helical units in double, triple and quadruple reduction gear stages having a maximum output torque of up to 162,000 Nm.

The modular design and construction of the Series G offers many engineering and performance benefits including a high degree of interchangeability of parts and sub assemblies. This in turn provides considerable economies of production whilst maintaining the highest standard of component integrity.

Adding to the range of power transmission geared motors this product takes advantage of our many years of accumulated design expertise together with the use of high quality materials and components. The end result is a series of speed reducing gear units offering high load carrying capacities, increased efficiency, quiet running and reliability.

### The Range Includes

- 8 sizes of units with a ratio coverage of 6.3:1 to 315:1.
- Parallel shaft helical units and Right angle bevel/helical units.

### Design Features Include

- Profile ground helical gears / hard finished spiral bevel gears.
- High level of surface finish for quiet running.
- Units can be offered in horizontal mounting positions or alternatively vertical mounting.
- Specially designed units are available for heavy duty agitator or tower applications.
- All units are also available with a hollow bore for output shaft mounting. Output bores are connected by a shrink disc or can be supplied with a keyed sleeve.
- Backstops can be fitted to all Series G units when required to operate in non-reversing drives.

*As improvements in design are being made continually this specification is not to be regarded as binding in detail and drawings and capacities are subject to alteration without notice. Certified drawings will be sent on request.*

Parallel shaft unit

Right angle shaft unit

Type 'J' right angle shaft unit

Right angle shaft unit with mechanical fan and hollow output shaft with shrink disc

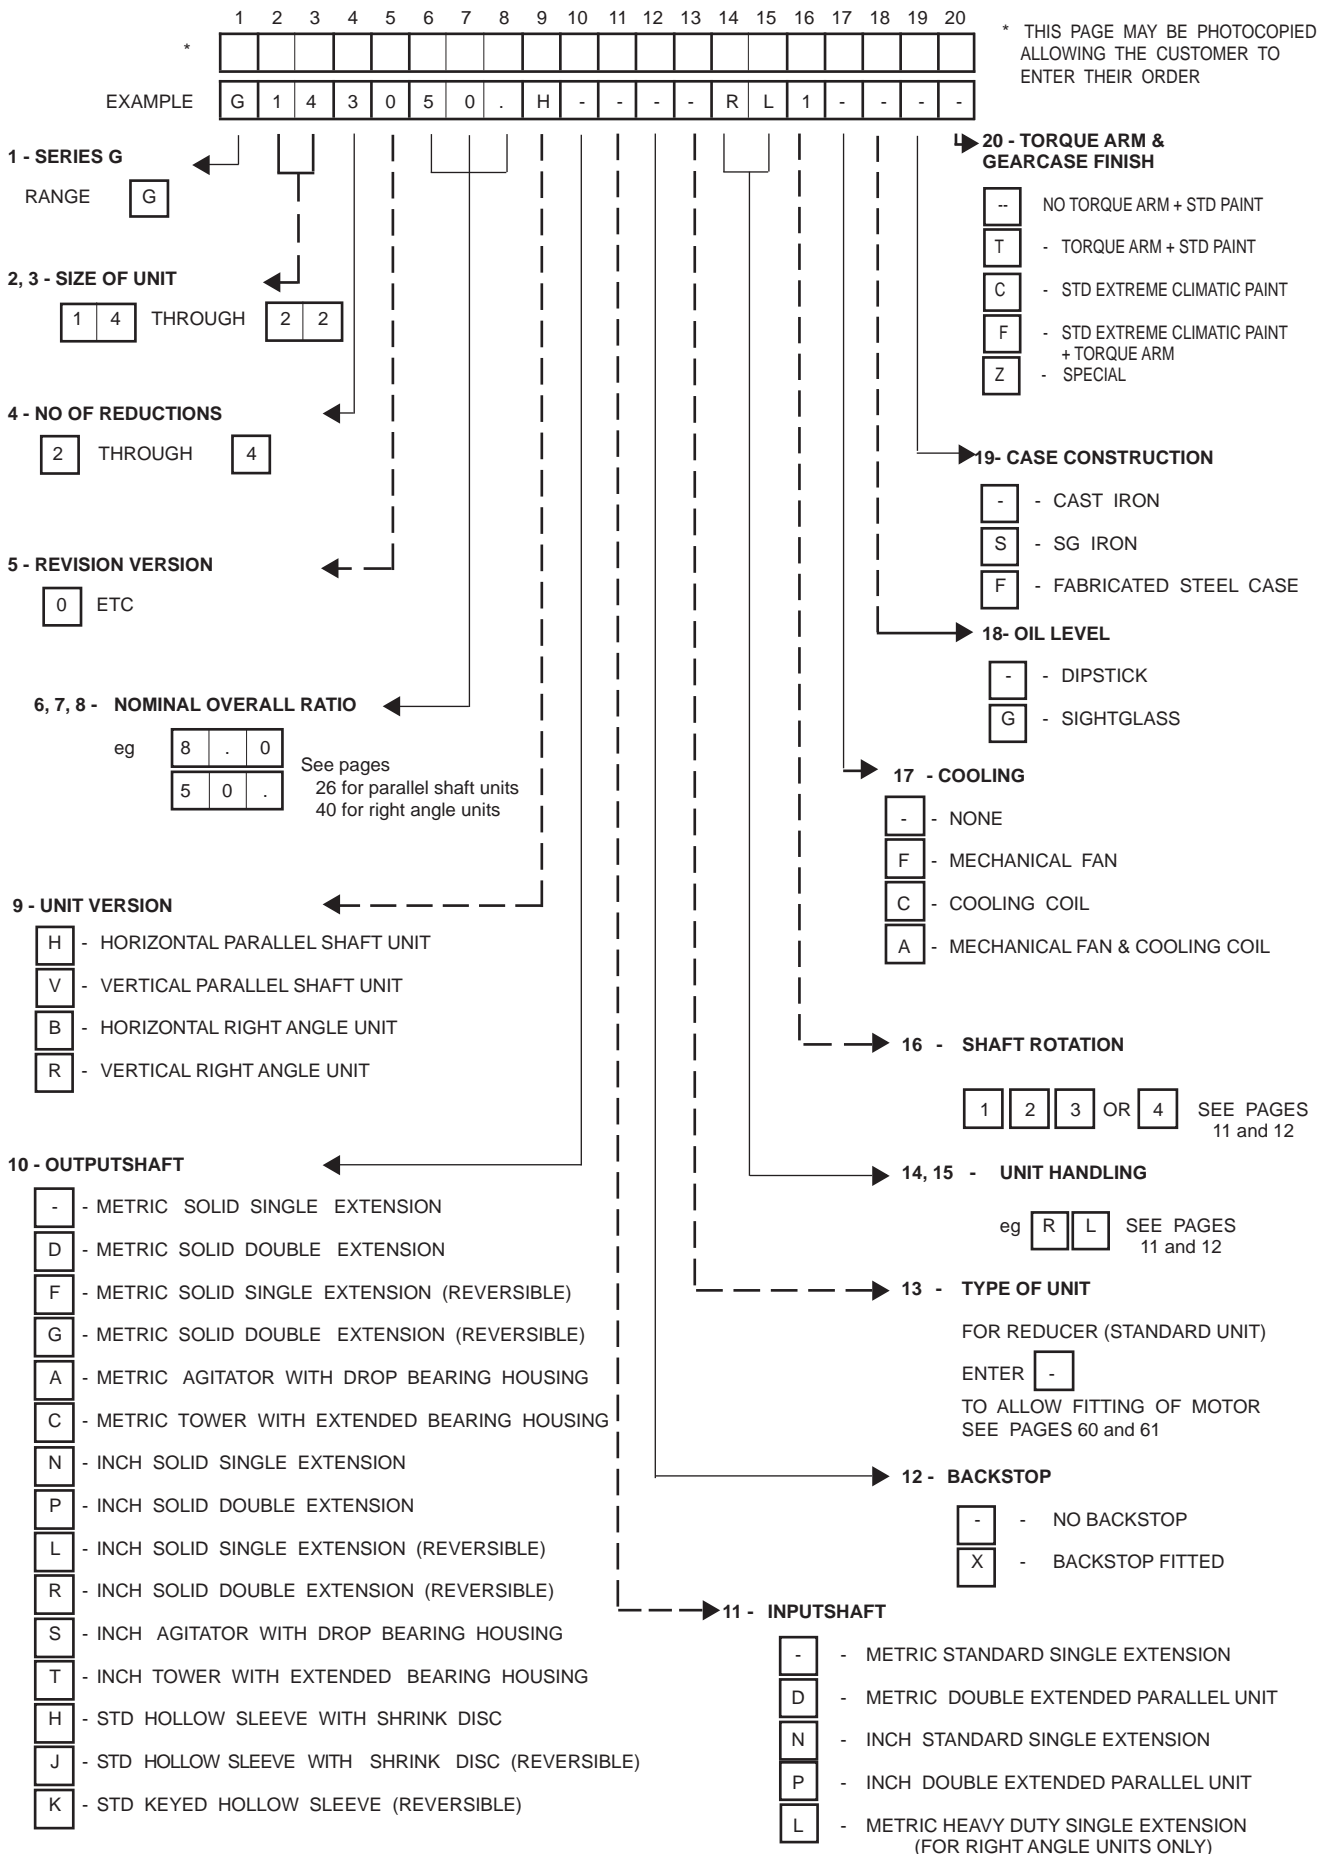

Parallel shaft unit with a lantern housing coupling and motor

Right angle heavy duty agitator unit

# SERIES G

## UNIT DESIGNATIONS

REVERSIBLE OPTION SHOULD BE SELECTED FOR ALL UNITS SUBJECT TO TORQUE REVERSALS  
(see page 5 for explanation of use and associated rating factors)

### Shaft Mounted Units

Shaft mounted units can be mounted on the driven machine shaft extension and connected to the foundation by a torque arm, supplied as an optional extra.

Additionally, unit feet are available for mounting on a baseplate with motor and coupling, the complete assembly being mounted on the driven machine shaft extension and connected to the foundation by a torque arm.

Shaft mounted units are fitted with a 'shrink disc' device to provide positive clamping on the driven machine shaft extension. It is positioned on the input side of the gear unit.

Shaft mounted units with keyed sleeves may also be supplied for fitting on to a keyed shaft.

### Motorised Gear Units

Gear units are available as standard assemblies comprising IEC standard metric (B5) flanged and NEMA 'C' motors directly mounted on the gearcase input shaft housings by adaptors. Motor and gear unit shafts are connected by flexible couplings.

### Baseplates

Standard baseplates can be supplied for units with parallel or right angle shafts. Assemblies comprise of gear units and foot mounted motors correctly aligned in manufacture and connected by our couplings. Coupling guards are fitted.

Baseplates for right angle shaft gear units are designed for use with either foot or shaft mounted arrangements, and provision is made for attaching torque arms where required.

Designs provide ample stiffness to prevent distortion under load. Full details are available from our Application Engineers.

### Backstops

Externally mounted Backstops can be fitted to all Series G gear units, when required to operate in non-reversing drives. They are located on the helical pinion shaft and have adequate capacities to deal with full rated torques. All backstops are centrifugal lift off type. Changing the direction of locking rotation is a simple operation. If required, a torque limiting backstop with controllable tension release can be fitted to all units (consult our Application Engineers).

### Preservation / Protection

Series G gear units are despatched without oil.

Prior to despatch they are test run with a rust preventative oil giving adequate protection to internal parts for a period of six months covering normal transport and covered storage.

Shaft extensions and hollow output shafts are protected with a rust inhibitor which is proof against sea water and suitable for under-cover storage up to 12 months.

Note: Where gear units are to operate in abnormal conditions, or where they are to stand for long periods without running, eg in plant installation, we must be notified so that suitable protective arrangements can be made.

### Gears

High quality alloy case hardening materials provide long life wear resistance and fatigue strength.

Profile ground single helical gears and hard finished spiral bevel gears ensure high standards of accuracy, surface finish and quiet running characteristics. Helical gears are fitted in parallel shaft units. Units with shafts at right angles incorporate spiral bevel and helical gears.

### Gearcases

Standard gearcases are of rigid cast iron construction with modern styling, special cases can be supplied as SG iron or fabricated steel.

Horizontal split case design for ease of maintenance.

Gearcase design using finite element analysis to give high strength to weight ratio.

Inspection cover provided for viewing gear contacts.

Oil level dipstick, ventilator and drain plugs are fitted.

With an option to fit an oil level sight glass.

### Gearcase Finish

Gearcase housings are shot blasted to SA 2-1/2 (or better) prior to painting.

Standard Paint System - Short oil alkyd resin/pigment semi-gloss, Colour: - RAL 5009 (Blue).

Optional Paint System for Extreme Climatic and Environmental Conditions - Two pack epoxy acrylic semi-gloss finish, Colour: - RAL 5009 (Blue).

Both paint systems are resistant to dilute acids and alkalis, oils and solvents, sea water and temperatures up to 140 Deg C.

### External Dimensions

Shaft extensions and hollow wheelshaft bores are to metric standards.

Fasteners are metric.

### Lubrication

Lubrication in most instances is by the transfer of oil by gears dipping in the sumps of gear unit bases. Where high pitch line speeds could cause churning of the lubricant. Spray lubrication is necessary where shown and complete systems can be supplied when required.

The unit oil grade and change period will be stamped on the nameplate. The change period will be 6 months for mineral oil based lubricants and 18 months for synthetic oil based lubricants. These figures assume a sump temperature of 110°C. Oil change periods can be extended for lower sump temperatures see installation and maintenance leaflet.

Units are provided with a dipstick, ventilator and drain plugs.

### Cooling

Depending on the application standard gear units are cooled by:-  
Normal heat dissipation by convection from external surfaces.  
Mechanical fan fitted to high speed shaft.  
Cooling water coil fitted in gear unit base.  
Fan and cooling coil.  
Separate oil cooler incorporated in forced lubrication system.

As improvements in design are being made continually this specification is not to be regarded as binding in detail and drawings and capacities are subject to alteration without notice. Certified drawings will be sent on request.

# SERIES G

## EXPLANATION AND USE OF RATINGS AND ASSOCIATED RATING FACTORS

Gear unit selection is made by comparing actual loads with catalogue ratings. Catalogue ratings are based on a standard set of loading conditions, whereas actual load conditions vary according to type of application. Service Factors are therefore used to calculate an equivalent load to compare with catalogue ratings. i.e. Equivalent Load = Actual Load x Service Factor

Mechanical and Thermal Service Factor must be considered:- Mechanical Service Factors F<sub>m</sub> and F<sub>s</sub>  
Thermal Service Factors F<sub>t</sub>, F<sub>d</sub>, F<sub>h</sub> and F<sub>v</sub>

### Mechanical ratings and service factors F<sub>m</sub> and F<sub>s</sub>

Mechanical ratings measure capacity in terms of life and/or strength, assuming 10 hr/day continuous running under uniform load conditions.

Catalogue ratings allow 100% overload at starting, braking or momentarily during operation up to 10 times per day.

The unit selected must therefore have a catalogue rating at least equal to half maximum overload.

Mechanical Service Factor F<sub>m</sub> (Table 1) is used to modify the actual load according to daily operating time, and type of loading. Required mechanical power rating P(mech) = absorbed power x F<sub>m</sub>

Load characteristics for a wide range of applications are detailed in Table 3 opposite, which are used in deciding the appropriate Service Factor F<sub>m</sub> from Table 1.

If loading can be calculated, or accurately assessed, actual loads should be used instead modifying using F<sub>m</sub>.

For units subject to torque reversal or frequent stop/start overloads in excess of 10 times per day, the following check should be made

$$\text{gear unit input power capacity (kW)} \geq \frac{T_m \times F_s \times n}{2 \times 9550}$$

Where T<sub>m</sub> = motor starting torque (Nm) or rating of torque limiting device, fluid coupling etc

n = input speed (rev/min)

F<sub>s</sub> = number of starts factor (See table 2)

For applications where high inertia loads are involved e.g. crane travel drives, slewing motion etc, or when units are to operate in extremely dusty or moist/humid atmospheres, unit selection should be referred to our Application Engineers.

**Table 1. Mechanical Service Factor (F<sub>m</sub>)**

Prime Mover	Duration of service hours per day	Load classification-driven machine		
		Uniform	Moderate Shock	Heavy Shock
Electric motor, stream turbine or hydraulic motor	Under 3	1.00	1.00	1.50
	3 to 10	1.00	1.25	1.75
	Over 10	1.25	1.50	2.00
Multi-cylinder internal combustion engine	Under 3	1.00	1.25	1.75
	3 to 10	1.25	1.50	2.00
	Over 10	1.50	1.75	2.25
Single cylinder internal combustion engine	Under 3	1.25	1.50	2.00
	3 to 10	1.50	1.75	2.25
	Over 10	1.75	2.00	2.50

**Table 2. Number of Starts Factor (F<sub>s</sub>)**

Start / Stops per hour (1)	Up to 1	5	10	40	60	≥200
Unidirectional	1.0	1.03	1.06	1.10	1.15	1.20
Reversing	1.4	1.45	1.50	1.55	1.60	1.70

Note: (1) Intermediate values are obtained by linear interpolation

## EXPLANATION AND USE OF RATINGS AND ASSOCIATED RATING FACTORS

### Thermal ratings and service factors

The Thermal ratings are a measure of the gear units ability to dissipate heat. If they are exceeded the lubricant may overheat and breakdown, resulting in gear failure.

Thermal ratings are given on page 32 for parallel shaft units and page 46 for right angle shaft units. The following choices are available:

- i) No additional cooling
- ii) Unit fitted with fan cooling
- iii) Unit fitted with water cooling coil
- iv) Unit fitted with cooling coil and fan

Catalogue thermal limitations are based on the unit operating continuously in an environment with an ambient temperature equal to 25°C and in a horizontal mounting position. The thermal rating is affected by ambient temperature, duration of running per hour, altitude and operating area. To account for these varying conditions, the service factors given in tables 4, 5, 6 and 7 should be applied as follows:-

$$P_{therm} = \frac{\text{Absorbed Power}}{F_t \times F_d \times F_h \times F_v}$$

- $P_{therm}$  = Required thermal rating (kW)
- $F_t$  = Service factor for ambient temperature (see Table 4)
- $F_d$  = Service factor for intermittent duty (see Table 5)
- $F_h$  = Thermal service factor for altitude (see Table 6)
- $F_v$  = Thermal service factor for air velocity correction (operating area) (see Table 7)

**Table 4. Ambient Temperature Factor (Ft)**

Unit Type	Ambient Temperature							
	-20°C	-10°C	0°C	15°C	25°C	30°C	35°C	45°C
All Units	1.65	1.50	1.35	1.14	1.00	0.93	0.86	0.71

**Table 5. Intermittent Duty Factor (Fd)**

Unit Output Speed (Rev / min)	% Running time per hour				
	100	80	60	40	20
0 to 10	1.00	1.18	1.45	1.72	2.38
>10 to 25	1.00	1.16	1.39	1.64	2.22
>25 to 50	1.00	1.14	1.31	1.54	2.00
>50 to 100	1.00	1.08	1.19	1.33	1.64
>100 to 150	1.00	1.04	1.08	1.19	1.41
>150 to 200	1.00	1.00	1.00	1.06	1.23
>200	1.00	1.00	1.00	1.00	1.00

**Table 6. Altitude Adjustment Factor (Fh)**

Altitude (m)	Factor Fh
Sea Level	1.0
500	0.97
1000	0.93
1500	0.90
2000	0.87
3000	0.81
4000	0.75
5000	0.70

**Table 7. Ambient Air Velocity Correction Factor (Fv)**

Use  $F_v = 1.0$  For Fan Cooled Units

Operating Area	If Vv is not known use this value for Fv	Air Velocity Vv m/sec	Factor Fv If Vv is known use this formula for Fv
Small confined space (no fan)	0.86	0 - 1.4	$F_v = 0.1 V_v + 0.86$
Large indoor space (& fan cooled)	1	> 1.4 - < 6	$F_v = 0.2 V_v + 0.72$
Sheltered outdoor space (no fan)	1.3	> 2 - < 6	$F_v = 0.17 V_v + 0.9$
Outdoor space (no fan)	1.5	> 2	$F_v = 0.17 V_v + 0.9$ (max $F_v = 1.92$ )

### General

When checking thermal capacities of units, use actual load required to be transmitted, not rating of prime mover.

## SELECTION PROCEDURE

### EXAMPLE APPLICATION DETAILS

Absorbed power of driven machine = 70 kW  
 Output speed of gearbox or Input speed of machine = 65 rev/min  
 Application = Uniformly loaded belt conveyor operating in a large indoor space  
 Duration of service (hours per day) = 24hrs  
 Motor speed = 3 phase electric motor, 4 pole, 1450 rev/min  
 Mounting position = Horizontal, Right Angle Shaft  
 Ambient temperature = 35°C  
 Running time (%) = 100%  
 Altitude = Sea Level

### 1 DETERMINE RATIO OF GEARBOX REQUIRED

$$\frac{\text{Motor speed}}{\text{Gearbox output speed}} = \frac{1450}{65} = 22.31$$

Refer to exact ratios (page 40) for nearest standard ratio = 22:1

### 3 DETERMINE REQUIRED MECHANICAL OUTPUT TORQUE CAPACITY OF GEARBOX

Required mechanical = Absorbed power x Fm rating (Pmech)

$$P_{mech} = 70 \times 1.25 = 87.5 \text{ kW}$$

### 2 DETERMINE MECHANICAL SERVICE FACTOR (Fm)

Refer to Load Classification by Application, table 3, page 6

Application = Uniformly loaded belt conveyor

#### Conveyors-uniformly loaded or fed

apron	U	U = Uniform load
assembly	U	
belt	U	
bucket	U	
chain	U	

Refer to mechanical service factor (Fm), table 1, page 5

Duration of service (hours per day) = 24hrs

Prime mover	Duration of service-hrs per day	Load classification-drive	
		Uniform	Moderate Shock
Electric motor, steam turbine or hydraulic motor	Under 3	0.80	1.00
	3 to 10	1.00	1.25
	Over 10	1.25	1.50

Therefore mechanical service factor (Fm) = 1.25

### 4 DETERMINE SIZE OF GEAR BOX REQUIRED

Unit input power capacity  $\geq$  Pmech

Refer to ratings tables, Input speed = 1450rev/min, therefore refer to page 42.

NOMINAL RATIO	NOMINAL OUTPUT SPEED REV / MIN	CAPACITY	RIGHT ANGLE UNIT - SIZE			
			G14	G15	G16	G17
22.	65.9	Input Power - kW	69.2	103	185	243
		Output Torque - Nm	9550	14000	23700	35300

Mechanical input power capacity must be equal or more than required mechanical input power capacity of the gear box (Pmech). Required mechanical input power = 87.5 kW. At a 22:1 ratio, nominal output speed 65.9 a G15 unit has a mechanical input power capacity of 103 kW. Therefore the unit is acceptable.

If the unit is subject to torque reversal or frequent stop /starts the input power capacity must be checked in accordance with the formulae on page 5.

### 5 DETERMINE EXACT RATIO OF GEARBOX

Refer to exact ratios table, page 40

Nominal Ratio Column Entry	14	15	16	17
6 7 8				
2 2 .	21.775	21.541	21.756	22.894
Exact ratio =	21.541			

Go to point 6 page 9

## SELECTION PROCEDURE

### 6 DETERMINE THERMAL SERVICE FACTOR (Ft)

Refer to table 4, page 7  
Ambient temperature = 35°C

Ambient temperature °C	-20	-10	0	15	25	30	35
Factor Ft	1.65	1.50	1.35	1.14	1.00	0.93	0.86

Ft = 0.86

### 7 DETERMINE THERMAL SERVICE FACTOR (Fd)

Refer to table 5, page 7  
Unit running time per hour = 100%  
Nominal output speed (rev/min) = 65.9

Unit Output Speed (Rev / min)	% Running time per hour	
	100	80
>10 to 25	1.0	1.16
>25 to 50	1.0	1.14
>50 to 100	1.0	1.08

Fd = 1.0

### 8 DETERMINE ALTITUDE ADJUSTMENT THERMAL SERVICE FACTOR (Fh)

Refer to table 6, page 7

Altitude (m)	Factor Fh
Sea Level	1.0
500	0.97
1000	0.93

Fh = 1.0

### 9 DETERMINE AMBIENT AIR VELOCITY FACTOR (Fv)

Operating Area	If Vv is not known use this value for Fv	Air Velocity Vv m/sec	Factor Fv If Vv is known use this formula for Fv
Small confined space	0.86	0 - 1.4	$Fv = 0.1 Vv + 0.86$
Large indoor space & fan cooled	1.0	> 1.4 - < 6	$Fv = 0.2 Vv + 0.72$

Fv = 1.0

### 10 CALCULATE REQUIRED THERMAL RATING Ptherm

$$P_{therm} = \frac{\text{Absorbed Power (kW)}}{F_t \times F_d \times F_h \times F_v}$$

$$P_{therm} = \frac{70}{0.86 \times 1.0 \times 1.0 \times 1.0}$$

$$P_{therm} = 81.4 \text{ kW}$$

### 11 CHECK THERMAL CAPACITY

Refer to Page 46

Thermal Rating  $\geq$  Ptherm

#### Thermal Ratings Kw

#### Right Angle Shaft Units - Triple Reduction

Type of Cooling	Input Speed (rev/min)	Ratio	G1430	G1530	G1630
No Additional Cooling	960	12:1	62	65	107
		25:1	49	54	91
		56:1	31	37	65
Fan Cooling	1750	12:1	179	181	288
		25:1	154	161	261
		56:1	111	124	211
	1450	12:1	158	161	259
		25:1	135	142	234
		56:1	96	108	187
	1160	12:1	138	140	230
		25:1	117	123	207
		56:1	83	93	163
	960	12:1	124	126	210
		25:1	104	110	188
		56:1	73	83	147
Cooling Coil	1750	12:1	174	180	281
		25:1	149	160	255
		56:1	106	123	205

Ptherm = 81.4 kW  
therefore unit requires cooling.

Thermal rating for the nearest fan cooled G15 unit is

25:1 ratio = 142 Kw.

Thermal capacity is therefore acceptable.

### 12 CHECK OVERHUNG LOADS

If sprocket, gear, etc is mounted on the input or output shaft then refer to Overhung loads procedure, pages 18 TO 24

### 13 CHECK COUPLING HUB CAPACITIES

**NOTE:** It is advisable that all selections are verified by our Application Engineers.

If any of the following conditions occur then our Application Engineers **must** be consulted:-

- a) Inertia of the Driven Machine (Referred to motor speed) >1.0      b) Ambient temperature is above 50°C  
Inertia of Gear Unit plus Motor

## LUBRICATION

All Series G units are despatched without oil (a warning label is attached), and therefore filled by the client. The grade and type of oil will be stamped on the nameplate in accordance with either of the types of oil from tables 2 and 3. Recommended oils are listed in the Approved Lubrication scheme booklet. The oil change period will be as stated in the lubrication section of Design Features page 4.

The approximate quantity of oil required is given in Table 1, but the unit should always be filled to the level marked on the dipstick or any other level indicator fitted (sight glass etc). Warning: Do not overfill the unit as this can cause leakage and overheating.

Where possible run the unit without load for a short time to circulate the lubricant thoroughly, then stop the unit and recheck the oil level after allowing the unit to stand for 10 minutes and if necessary top up to the correct mark on the dipstick or any other level indicator fitted (sight glass etc).

In addition where bearings are grease packed, the greases approved are NLGI grade 2 and recommended greases are listed in the Approved Lubrication scheme booklet.

**TABLE 1 LUBRICANT QUANTITY (Litres)**

Unit Type		UNIT SIZE							
		14	15	16	17	18	19	21	22

## OVERHUNG & AXIAL LOADS ON SHAFTS

### Maximum permissible overhung loads

When a sprocket, gear etc. is mounted on the shaft a calculation, as below, must be made to determine the overhung load on the shaft, and the results compared to the maximum permissible overhung loads tabulated. Overhung loads can be reduced by increasing the diameter of the sprocket, gear, etc. If the maximum permissible overhung load is exceeded, the sprocket, gear, etc. should be mounted on a separate shaft, flexibly coupled and supported in its own bearings, or the gear unit shaft should be extended to run in an outboard bearing. Alternatively, a larger gear is often a less expensive solution.

Permissible overhung loads vary according to the direction of rotation. The values tabulated are for the most unfavourable direction with the unit transmitting full rated power and the load P applied midway along the shaft extension. Hence they can sometimes be increased for a more favourable direction of rotation, or if the power transmitted is less than the rated capacity of the gear unit, or if the load is applied nearer to the gear unit case. Refer to our Application Engineers for further details. In any event, the sprocket, gear etc. should be positioned as close as possible to the gear unit case in order to reduce bearing loads and shaft stresses, and to prolong life.

All units will accept 100% momentary overload on stated capacities.

### Overhung load (Newtons)

$$P = \frac{\text{kW} \times 9,500,000 \times K}{N \times R}$$

where

- P = equivalent overhung load (Newtons)
- kW = power transmitted by the shaft (kilowatts)
- N = speed of shaft (rev/min)
- R = pitch radius of sprocket, etc. (mm)
- K = factor

### Overhung member K (factor)

Chain sprocket*	1.00
Spur or helical pinion	1.25
Vee belt sheave	1.50
Flat belt pulley	2.00

\* If multistrand chain drives are equally loaded and the outer strand is further than dimension A output or B input, refer to our Application Engineers.

Note: 1 Newton = 0.10197 kg = 0.2248 lbs.

### Output Shaft - Distance 'A'

(midway along the shaft extension)

Size of unit	Dimension A(mm)
G14	90
G15	95
G16	115
G17	125
G18	150
G19	175
G21	175
G22	190

### Input Shaft - Distance 'B'

(midway along the shaft extension)

Size of unit	Parallel Shaft Unit		Right Angle Shaft Unit	
	2 Stage	3 & 4 Stage	3 Stage	4 Stage
G14 and G15	67.5	47.5	50	-
G16 and G17	72.5	57.5	70	50
G18 and G19	95	72.5	80	70
G21 and G22	105	95	105	80

### Axial Thrust Capacities (Newtons)

Permissible axial thrust capacities vary according to the direction of rotation and the direction of thrust, towards or away from the unit. The values tabulated are for the most unfavourable direction and hence can sometimes be increased. Similarly they can sometimes be increased if the power transmitted is less than the rated capacity of the gear unit.

Thrust capacities tabulated refer to outputshafts, and are calculated without any overhung loads being applied. In cases where combined axial thrusts and overhung loads are to be applied, refer to our Application Engineers.

## AGITATOR APPLICATIONS

### BENDING MOMENT CAPACITY

To calculate the Bending Moment on the gearbox output shaft using the method recommended in The Engineering Equipment Users' Association Handbook No. 9:-

$$\text{Bending Moment} = \frac{\text{Absorbed Power (kW)} \times 9.5 \times L}{\text{Shaft Speed} \times 0.75 R} = \text{kNm}$$

The above information is given for guidance. When more precise bending moment values are available they should be used.

Check the Bending Moment Capacity of the Gearbox  
Agitator units are suitable for supporting a paddle directly coupled to the gearbox output shaft and for accepting the bending moments and axial thrusts generated from the forces at the paddle. Agitator type units have an extended bearing span and taper bearings to accept higher loads than the standard unit.

Check the Bending Moment Capacity limited by shaft stress, using Table 2.

Check the Bending Moment Capacity limited by bearing life, using Table 3.

Note: Bearing Capacities are based on 10,000 hours, L10 life. For other bearing lives multiply the values in Table 3 by the factors in Table 1.

**Table 1 Bearing Life Factors ( $F_b$ )**

	Required Life (hours)				
	5000	10000	25000	50000	100000
Factor	1.23	1	0.76	0.62	0.50
For intermediate values					
$F_b = \left( \frac{10000}{\text{Required Life (hours)}} \right)^{0.3}$					

**Table 2 Bending Moment Capacity (kNm)**

Allowable Bending Moment at output shaft lower bearing, limited by SHAFT STRESS

Unit Type	Unit Size							
	14	15	16	17	18	19	21	22
Agitator Units	11.2	17.3	24.2	37.3	50	68	102	**

**Table 3 Bending Moment Capacity (kNm)**

Allowable Bending Moment on output shaft bearings, limited by BEARING LIFE (10,000 hrs L10)\*

Unit Type	Output Speed rev/min	Unit Size							
		14	15	16	17	18	19	21	22
Agitator Units	< 240	5.9	10.9	11.5	25.7	26.9	36.8	40	**
	< 180	7.4	12.9	14.5	30.1	33.7	45	53	
	< 130	10.6	16.8	21.2	38.9	48.8	61	84	
	< 90	11.5	18.4	22.9	42.6	53	68	91

## AGITATOR APPLICATIONS

### AXIAL THRUST LOADS

**Table 4 Axial thrust capacity (kN)**

Allowable thrust on output shaft, limited by COVER BOLT STRESS

Unit Type	Unit Size							
	14	15	16	17	18	19	21	22
Agitator Units	30	40	55	65	65	65	150	**

Note: The values in table 4 are calculated for the most adverse direction of rotation. For the opposite rotation they can be increased. Consult our Application Engineers for an analysis where necessary.

**Table 5 Axial thrust capacity (kN)**

Allowable thrust on output shaft, limited by BEARING LIFE (10,000 hrs L10)\*

Direction Of Thrust	Unit Type	Output Speed rev/min	Unit Size							
			14	15	16	17	18	19	21	22
↑	Agitator Units	< 240	14	26	23	51	40	55	56	**
		< 180	14	27	24	52	41	56	58	
		< 130	15	28	25	52	41	57	58	
		< 90	16	30	28	57	46	63	66	
		< 45	26	43	45	81	75	97	110	
		< 20	40	63	70	116	115	146	175	
↓	Agitator Units	< 240	10	22	17	44	31	45	40	**
		< 180	11	23	18	45	32	46	41	
		< 130	11	24	18	46	32	47	41	
		< 90	13	25	21	50	37	53	50	
		< 45	23	39	38	74	65	86	93	
		< 20	36	59	64	110	106	135	157	

\* For other lives multiply values by the factors in table 1 page 21.

Note: Values are based on the most unfavourable directions of rotation. Higher values may be permitted after analysis by our Application Engineers.

## PARALLEL SHAFT UNIT

### THERMAL RATINGS

#### Thermal Ratings kW

These thermal ratings assume the gear unit is in constant use working in an ambient temperature of 25°C \* installed in a large indoor space at sea level.

These ratings must be adjusted for alternative operating and environment conditions refer to Thermal ratings and service factors on page 6.

\*maximum bulk oil temperature 95°C

#### Parallel Shaft Units - Double Reduction

## RIGHT ANGLE SHAFT THERMAL RATINGS

### Thermal Ratings kW

These thermal ratings assume the gear unit is in constant use working in an ambient temperature of 25°C (77°F) \* installed in a large indoor space at sea level.

These ratings must be adjusted for alternative operating and environment conditions refer to Thermal ratings and service factors on page 6.

\*maximum bulk oil temperature 95°C (203°F)

## HOLLOW OUTPUT SHAFT WITH SHRINK DISC

The gear unit is fitted with a 'shrink disc' device located on the hollow output shaft to provide a positive outer locking connection between gear unit and driven shaft. The 'shrink disc' is a friction device, without keys, which exerts an external clamping force on the hollow output shaft, thus establishing a mechanical shrink fit between the gear unit hollow shaft and driven shaft. 'Shrink disc' capacities have ample margins in dealing with transmitted torques and external loading imposed on gear units.

### WORKING PRINCIPLE

The 'shrink disc' consists of a locking collar, a tapered inner ring and locking screws. By tightening the locking screws, the locking collar and tapered inner ring are pulled together, exerting radial forces on the inner ring, thus creating a positive friction connection between hollow shaft and driven shaft.

As the tapered surfaces of locking collar and inner ring are lubricated with Molykote 321R or similar and the taper angle is not self locking, locking collar will not seize on the inner ring and can be released easily when removal is necessary.

When the shrink disc is clamped in position the high contact pressures between tapered surfaces and screw heads and their seatings ensure hermetic sealing and eliminate the possibility of fretting corrosion.

# SERIES G COOLING COIL CONNECTIONS

Cooling coils can be fitted to all unit types and handings.

Cooling coil connections for water inlet and outlet pipes are  $\varnothing 12\text{mm}$  on all sizes.

The protruding cooling coil pipe can be connected to customers pipe work via a suitable straight coupling.

**Water supply:** Cooling coils are suitable for fresh, brackish or sea water with flow in either direction. Connections are therefore interchangeable.

For best performance, the water supply should be at  $10^{\circ}\text{C}$  /  $12^{\circ}\text{C}$  temperature and at a flow rate of 5 litres / minute.

19	385	200	285
21	400	200	355
22	420	200	355

Externally mounted Backstops can be fitted to all Series G gear units, when required to operate in non-reversing drives. They are located on the helical pinion shaft and have adequate capacities to deal with full rated torques. All backstops are centrifugal lift off type. Changing the direction of locking rotation is a simple operation.

### Parallel Shaft Units

Column 16 entry, shaft rotation shown

### Right Angle Shaft Units

Column 16 entry, shaft rotation shown

For right angle units, if backstop position is required at opposite side of unit to outputshaft, column 16 entry must be 3 or 4 (see page 14)

G19	635			
G21	765	500	310	200-63
G22	805			

Note: Torque limiting backstops with controllable tension release can be fitted to all Series G units (for details consult our Application Engineers).

# SERIES G

## TORQUE ARM

Torque arms are available for all shaft mounted units with parallel or right angle shafts. They are supplied as optional extras and are secured to gear cases as shown below.

Torque arms must be secured to the chassis structure in a flexible mounting as indicated.

Shaft mounted units are designed to operate in the horizontal position. Reference must be made to our Application Engineers, with details, where units are required to operate in an inclined position.

### SHAFT MOUNTED UNITS FOR HIGH INERTIA DRIVE

When used on Traverse drives with high inertia driven loads, eg crane drives (slewing, long travel and cross travel) bogie drives and selected high inertia load roller table drives, it is recommended that shaft mounted units should be fitted with shock absorbing Torque Arms. Consult our Application Engineers with specific application details.

It is recommended that the torque arm is fitted on the side of the unit adjacent to the driven machine.

The torque arm must be flexibly mounted to the chassis structure

## IMPORTANT

### Product Safety Information

**General** - The following information is important in ensuring safety. It **must** be brought to the attention of personnel involved in the selection of the equipment, those responsible for the design of the machinery in which it is to be incorporated and those involved in its installation, use and maintenance.

The equipment will operate safely provided it is selected, installed, used and maintained properly. As with any power transmission equipment **proper precautions must** be taken as indicated in the following paragraphs, to ensure safety.

**Potential Hazards** - these are **not** necessarily listed in any order of severity as the degree of danger varies in individual circumstances. It is important therefore that the list is studied in its entirety:-

- 1) Fire/Explosion
  - (a) Oil mists and vapour are generated within gear units. It is therefore dangerous to use naked lights in the proximity of gearbox openings, due to the risk of fire or explosion.
  - (b) In the event of fire or serious overheating (over 300 °C), certain materials (rubber, plastics, etc.) may decompose and produce fumes. Care should be taken to avoid exposure to the fumes, and the remains of burned or overheated plastic/rubber materials should be handled with rubber gloves.
- 2) Guards - Rotating shafts and couplings must be guarded to eliminate the possibility of physical contact or entanglement of clothing. It should be of rigid construction and firmly secured.
- 3) Noise - High speed gearboxes and gearbox driven machinery may produce noise levels which are damaging to the hearing with prolonged exposure. Ear defenders should be provided for personnel in these circumstances. Reference should be made to the Department of Employment Code of Practice for reducing exposure of employed persons to noise.
- 4) Lifting - Where provided (on larger units) only the lifting points or eyebolts must be used for lifting operations (see maintenance manual or general arrangement drawing for lifting point positions). Failure to use the lifting points provided may result in personal injury and/or damage to the product or surrounding equipment. Keep clear of raised equipment.
- 5) Lubricants and Lubrication
  - (a) Prolonged contact with lubricants can be detrimental to the skin. The manufacturer's instruction must be followed when handling lubricants.
  - (b) The lubrication status of the equipment must be checked before commissioning. Read and carry out all instructions on the lubricant plate and in the installation and maintenance literature. Heed all warning tags. Failure to do so could result in mechanical damage and in extreme cases risk of injury to personnel.
- 6) Electrical Equipment - Observe hazard warnings on electrical equipment and isolate power before working on the gearbox or associated equipment, in order to prevent the machinery being started.
- 7) Installation, Maintenance and Storage
  - (a) In the event that equipment is to be held in storage, for a period exceeding 6 months, prior to installation or commissioning, application engineering must be consulted regarding special preservation requirements. Unless otherwise agreed, equipment must be stored in a building protected from extremes of temperature and humidity to prevent deterioration.  
The rotating components (gears and shafts) must be turned a few revolutions once a month (to prevent bearings brinelling).
  - (b) External gearbox components may be supplied with preservative materials applied, in the form of a "waxed" tape overwrap or wax film preservative. Gloves should be worn when removing these materials. The former can be removed manually, the latter using white spirit as a solvent.  
  
Preservatives applied to the internal parts of the gear units do not require removal prior to operation.
  - (c) Installation must be performed in accordance with the manufacturer's instructions and be undertaken by suitably qualified personnel.
  - (d) Before working on a gearbox or associated equipment, ensure that the load has been removed from the system to eliminate the possibility of any movement of the machinery and isolate power supply. Where necessary, provide mechanical means to ensure the machinery cannot move or rotate. Ensure removal of such devices after work is complete.
  - (e) Ensure the proper maintenance of gearboxes in operation. Use only the correct tools and approved spare parts for repair and maintenance. Consult the Maintenance Manual before dismantling or performing maintenance work.
- 8) Hot Surfaces and Lubricants
  - (a) During operation, gear units may become sufficiently hot to cause skin burns. Care must be taken to avoid accidental contact.
  - (b) After extended running the lubricant in gear units and lubrication systems may reach temperatures sufficient to cause burns. Allow equipment to cool before servicing or performing adjustments.
- 9) Selection and Design
  - (a) Where gear units provide a backstop facility, ensure that back-up systems are provided if failure of the backstop device would endanger personnel or result in damage.
  - (b) The driving and driven equipment must be correctly selected to ensure that the complete machinery installation will perform satisfactorily, avoiding system critical speeds, system torsional vibration, etc.
  - (c) The equipment must not be operated in an environment or at speeds, powers, torques or with external loads beyond those for which it was designed.
  - (d) As improvements in design are being made continually the contents of this catalogue are not to be regarded as binding in detail, and drawings and capacities are subject to alterations without notice.

The above guidance is based on the current state of knowledge and our best assessment of the potential hazards in the operation of the gear units.

Any further information or clarification required may be obtained by contacting an Application Engineer.
